GIOVANNI A. CAROSSO, PhD

bioengineer / founding scientist

San Francisco, CA | gacarosso@gmail.com | USA & Italian citizen

gcarosso.bio | LinkedIn | GitHub | Scholar

SUMMARY

Biomolecular engineer and biotech operator building programmable biological modalities and drug discovery platforms. As Founding Head of Research at General Control, set R&D strategy and advanced a multi-program, platform-engineered pipeline of epigenetic editors from concept to *in vivo* validation inside 18 months, supporting seed financing and a Novo Nordisk partnership. Previously a founding scientist at Epicrispr, co-developing the GEMS modality behind clinical-stage EPI-321 and durable-activation EPI-331. Skilled in architecting biological design-test-build loops for protein and mRNA therapeutics, quantitative experimentation, and agentic LLM frameworks for decision-grade reasoning. Expertise in technical tooling, scalable platform design, epigenetics, protein LMs and engineering, translational biology, and preclinical strategy/diligence (cardiometabolic, muscular).

TECHNICAL & OPERATING SKILLS

Discovery platforms: high-throughput synthetic biology; perturbation screening (CRISPRa/i); functional genomics; proteomics; scalable vector design; mRNA-LNP; NGS; Python (NumPy, pandas, Biopython); R (tidyverse, ggplot2).

ML-guided protein engineering: sequence–function modeling (ESM-2 embeddings, XGBoost); evolutionary optimization (EMCS); generative design (BoltzGen); structure evaluation (Boltz-2).

LLM tooling: multi-model agentic architectures (Conclave); evaluations & benchmarking; clinical landscaping (SAROS).

SELECTED OPEN-SOURCE CONTRIBUTIONS

Conclave—Multi-model LLM orchestrator (Claude, Codex, Gemini, Grok) for agentic routing, review, provenance.

SAROS—Clinical readout ledger (FY26–28) with sponsor info from public filings; compares programs, not molecules.

EXPERIENCE

Capable Oct 2026 – Present

Member of Technical Staff, Therapeutic Discovery

General Control Jul 2024 – Jul 2026

Founding Head of Research

- Owned scientific prioritization across a multi-program epi-editor engineering pipeline: translated ambiguous biology into *in vitro* engineering and *in vivo* milestones, coordinated internal scientists, computational biologists, and CROs to connect platform proof-points to financing and pharma-partner objectives.
- Delivered concept-to-validation of preclinical platform for 6-of-7 programs in 18 months by designing and deploying rapid engineering and translational campaigns of novel epi-editors against industry benchmarks; established single-dose, multiplexed targeting as a modality differentiator, delivering 90% knockdown of three targets in parallel.
- Accelerated preclinical hit-translation cycles from 16 to 3 weeks by devising an IVT-compatible expression vector for high-throughput screening elements to proceed directly into the mRNA synthesis pipeline for animal dosing.
- Optimized editor potency and novelty profiles with a model-guided search strategy over peptide sequence space that generates diverse candidates, ranks by predicted function and structural confidence, and concentrates experimental resources on high-probability sequences. 155 novel editors outperformed benchmarks across diverse genetic targets.
- Shaped scientific IP and FTO strategy as lead inventor with counsel through PCT filings and evaluation of competitive patent landscapes.

Epicrispr Biotechnologies Jan 2021 – Jul 2024

Senior Scientist, Technology Development (previously Scientist II, Scientist)

- Co-developed GEMS modality platform by introducing a compact Cas chassis and engineering proprietary epi-editor domains behind EPI-321, now in first-in-human FSHD trial (NCT06907875), and EPI-331 for durable activation.
- Led discovery and engineering of hypercompact activator that sustained five-week *LDLR* activation via single-dose mRNA-LNP *in vivo*; first author on external preprint.
- Increased pooled-screen editor hit rates from 1% to 8%; generated sequence-function data and training set for collaborative ML-guided protein engineering. *NeurIPS* (2023).

University of California, San Francisco (UCSF) Jan 2020 – Dec 2020

Postdoctoral Scholar, Neurological Surgery; Lab of Daniel Lim, MD, PhD

- Integrated multi-omics data into a machine-learning classifier over genome-scale dual CRISPRi screens spanning 18,905 coding and 10,678 lncRNA loci, with the Weissman and Lim Labs. *Cell Genomics* (2022).

EDUCATION

Johns Hopkins University School of Medicine 2019

***PhD**, Human Genetics (Lab of Hans T. Bjornsson, MD, PhD)*

- Discovered molecular drivers in pediatric disorders of chromatin machinery, novel roles for KMT2D in oxygen sensing during neurodevelopment. Dissertation, *JCI Insight* (2019).
- Secured NASA award for astronaut epigenetics in the ISS Twins Study Consortium (Feinberg Lab); co-developed first protocols for in-flight epigenomic sampling aboard ISS and experiments for astronauts Scott and Mark Kelly.

University of California, Santa Barbara 2010

***BS**, Biopsychology*

- Discovery of *POLR3A* mutations causing pediatric leukodystrophy. *AJHG* (2011).
- Elucidated mechanisms of medial prefrontal cortex dysfunction in cocaine abuse. *Addiction Biology* (2012).

ADVISORY, PUBLIC ENGAGEMENT

STEM diplomacy: Led a U.S. Department of Defense-funded neuroscience workshop with *Clubes de Ciencia Bolivia*; taught in Spanish and published on science diplomacy.

Mindfire Global: Neurobiology consultancy; advised on neurodevelopment and human-centric AI collaboration.

Languages: Italian, French, Spanish, English.

PATENTS

PCT/US26/24051	— Systems and Methods for Upregulation of Exerkines. Filed 2026.
